

Are you interested in taking part in a research project looking at brain stimulation and Aggression associated with intellectual or developmental disabilities?

Researchers from Queen's University are conducting a clinical trial investigating the effects of transcranial Direct Current Stimulation (tDCS) on aggressive behaviours tied to intellectual or developmental disabilities.

We are looking for participants, **aged between 18 and 65 years**, who:

- have a diagnosis of intellectual disabilities and/or developmental delay
- have a recent history of aggressive behaviours (e.g., yelling, hitting, damaging property)
- have no history of major neurological conditions such as epilepsy or head injury
- have no metal implants or pacemakers in their body.

Participation in the study involves:

- Completing a questionnaire about the ways people typically think, feel and act.
- Taking part in a simulated computerized task before the brain stimulation session lasting about 15 minutes.
- Undertaking three brain stimulation sessions lasting for 20 minutes each.
